UNIK Group®, is an international company specialized in the manufacture and installation of metal structures for automated distribution centers.

The structures range from self-supporting rack buildings for stacker cranes, shuttle systems or miniloads, any type of indoor rack including gravity lanes, structures to support mono-rails or conveyor systems, as well as mezzanines and catwalk structures for operation or maintenance.

At Unik Group our mission is to provide to our customers all the necessary infrastructure to implement automated systems, using the best solutions and optimizing structures, reaching highly efficient projects.

The structures are manufactured in Mexico and Europe, based on the specific needs of each client and under the applicable regulations to each Project according to its location.

We offer turnkey projects, integrating and coordinating services and additional products, such as facades, fire systems, lightning protection systems, lifelines, related civil works, lighting, safety equipment and accessories such as fencing and protections, among others. All this through a professional and effective project management.

We are committed to our customers in accomplishing successful projects, maintaining long-term relationships.
